Hi Gary,

Quick update: We do not have soil EDDs yet. We have a partial preliminary EDD for the surface water sample.

With the various screening levels, it will be best if we can get data loaded and run a report through Scribe. However, we may not be able to get this completed early tomorrow morning since we don't have EDDs yet. As soon as we get the soil EDDs, we will load them. In the meantime, we have been working to pull together all of the screening levels that will be needed.

I will keep you posted!

Kristie

Derrick:

I just got off the phone with Kristie. I asked about the EDDs for the the samples that we have taken and she indicated that she could ask the lab to give us the Edd for the prelim data so we could begin the analyze the data for action. I need you guys to pull this together and then put the various screening levels as the comparisons.

Ditch Sample - Not sure what the comparison values would be. MCLs don't seem appropriate. Surface Water Quality?? Need EPA and/or TCEQ numbers.

Res Soil Samples - EPA RSLs Residential (Both 10-6, HI=1 and 10-6, HI=0.1 Numbers) also put both cancer risk number and non cancer risk number. We also need the TCEQ numbers.

Air Sample - EPA RSLs (Both 10-6, HI=1 and 10-6, HI=0.1 Numbers) also put both cancer risk number and non cancer risk number. Industrial numbers for On-site Air and Res Numbers for Res Samples. We also need the TCEQ numbers (Effects Screening Level and TRRP Numbers)

Attached are the rough tables I put together but I just can't continue to hand enter this stuff.
